LIST OF CONTENTS

NUMBER 1

H.-M. Hanisch — 1 Coordination control modelling in batch production systems by means of Petri nets

K. R. Jethani, N. J. Suchak and J. B. Joshi — 11 Modeling and simulation of a spray column for NO_x absorption

G. E. Rotstein and D. R. Lewin — 27 Control of an unstable batch chemical reactor

I. M. Alatiqi and A. M. Meziou — 51 Simulation and parameter scheduling operation of waste heat steam-boilers

Y. S. N. M. Rao, J. Bhat, M. Chidambaram and K. P. Madhavan — 61 Robust controllers for nonlinear chemical processes

67 Corrigendum

NUMBER 2

D. A. Straub and I. E. Grossmann — 69 Evaluation and optimization of stochastic flexibility in multiproduct batch plants

A. Aggarwal and C. A. Floudas — 89 Synthesis of heat integrated nonsharp distillation sequences

T. S. Ramesh, J. F. Davis and G. M. Schwenzer — 109 Knowledge-based diagnostic systems for continuous process operations based upon the Task framework

Short Note
J. Jeżowski — 129 The pinch design method for tasks with multiple pinches

NUMBER 3

M. Sokić, S. Todorčević and S. Zdravković — 135 Structuring of the optimum processing system: a better linearization method for the nonlinear cost objective function

S. H. Isaacs, A. Munack and M. Thoma — 141 Fast algorithms for the identification of parameters in a model of the external loop airlift fermenter

R. Raman and I. E. Grossmann — 155 Integration of logic and heuristic knowledge in MINLP optimization for process synthesis

H. E. Salomone and **O. A. Iribarren** 173 Posynomial modeling of batch plants: a procedure to include process decision variables

J. Y. Keller, M. Zasadzinski and **M. Darouach** 185 Analytical estimator of measurement error variances in data reconciliation

G. E. Paules IV and **C. A. Floudas** 189 Stochastic programming in process synthesis: a two-stage model with MINLP recourse for multiperiod heat-integrated distillation sequences

I. E. Colussi, M. Fermeglia, V. Gallo and **I. Kikic** 211 Supercritical multistaged multicomponent separation: process simulation

Letter to the Editors
W. R. Ernst 225 Approximation of the error function

NUMBER 4

NEURAL NETWORK APPLICATIONS IN CHEMICAL ENGINEERING

V. Venkatasubramanian and **T. J. McAvoy** v Editorial—Neural Network Applications in Chemical Engineering

DYNAMIC MODELING AND CONTROL

E. Hernández and **Y. Arkun** 227 Study of the control-relevant properties of back-propagation neural network models of nonlinear dynamical systems

J. C. Hoskins and **D. M. Himmelblau** 241 Process control via artificial neural networks and reinforcement learning

J. F. Pollard, M. R. Broussard, D. B. Garrison and **K. Y. San** 253 Process identification using neural networks

N. V. Bhat and **T. J. McAvoy** 271 Determining model structure for neural models by network stripping

C. Di Massimo, G. A. Montague, M. J. Willis, M. T. Tham and **A. J. Morris** 283 Towards improved penicillin fermentation via artificial neural networks

Short Note
W. R. Foster, F. Collopy and **L. H. Ungar** 293 Neural network forecasting of short, noisy time series

PATTERN RECOGNITION

S. N. Kavuri and **V. Venkatasubramanian** 299 Combining pattern classification and assumption-based techniques for process fault diagnosis

M. A. Kramer 313 Autoassociative neural networks

J. R. Whiteley and **J. F. Davis** 329 Knowledge-based interpretation of sensor patterns

M. L. Mavrovouniotis and S. Chang 347 Hierarchical neural networks

Short Note

R. S. H. Mah and V. Chakravarthy 371 Pattern recognition using artificial neural networks

INTEGRATION AND COMPARISON OF NEURAL NETS WITH STATISTICAL TECHNIQUES

S. J. Qin and T. J. McAvoy 379 Nonlinear PLS modeling using neural networks

T. R. Holcomb and M. Morari 393 PLS/neural networks

B. Joseph, F. H. Wang and D. S.-S. Shieh 413 Exploratory data analysis: a comparison of statistical methods with artificial neural networks

NUMBER 5

L. W. Chen and M. Modarres 425 Hierarchical decision process for fault administration

D. Dochain 449 Adaptive control algorithms for nonminimum phase nonlinear bioreactors

Ch. Venkateswarlu, K. Gangiah and M. Bhagavantha Rao 463 Two-level methods for incipient fault diagnosis in nonlinear chemical processes

F. O. Jegede and G. T. Polley 477 Capital cost targets for networks with non-uniform heat exchanger specifications

Y. L. Huang and L. T. Fan 497 Distributed strategy for integration of process design and control. A knowledge engineering approach to the incorporation of controllability into exchanger network synthesis

NUMBER 6

I.-B. Tjoa and L. T. Biegler 523 Reduced successive quadratic programming strategy for errors-in-variables estimation

W. Sun and C. A. V. Costa 535 Fast method for solving nonequilibrium fixed-bed adsorption models with variable velocity and linear isotherm

S. Krishnan, G. W. Barton and J. D. Perkins 545 Robust parameter estimation in on-line optimization—Part I. Methodology and simulated case study

M. H. Zwietering, P. Verlaan and A. K. M. Krolikowski 563 Optimal control of the dissolved oxygen concentration in an airlift-loop reactor

H.-J. Bart and Ch. Weiss 573 Application of streamfunction vorticity approach in design of an axisymmetric radial inflow geometry with free liquid surface

C. Sereno, A. Rodrigues and **J. Villadsen**	583	Solution of partial differential equations systems by the moving finite element method
J. L. Figueroa, A. C. Desages, J. A. Romagnoli and **A. Palazoglu**	593	Controller order reduction for process control systems
M. Mavrovouniotis, G. Stephanopoulos and **G. Stephanopoulos**	605	Synthesis of biochemical production routes
Short Note		
C. V. S. Murty and **K. Venkat Reddy**	621	Modelling of diffusion and multiple reversible reactions in a porous catalyst

NUMBER 7

R. J. Amarger, L. T. Biegler and **I. E. Grossmann**	623	An automated modelling and reformulation system for design optimization
B. K. Harrison	637	Computational inefficiencies in sequential modular flowsheeting
E. Kumpinsky	641	Solution of Bessel function characteristic equations
R. E. Hayes, S. T. Kolaczkowski and **W. J. Thomas**	645	Finite-element model for a catalytic monolith reactor
H. J. Greenberg	659	Intelligent analysis support for linear programs
S. Rajagopal, K. M. Ng and **J. M. Douglas**	675	A hierarchical procedure for the conceptual design of solids processes
J. Jeżowski	691	SYNHEN: microcomputer directed package of programs for heat exchanger network synthesis
E. C. Carlson and **R. M. Felder**	707	Simulation and queueing network modeling of single-product production campaigns
	719	Corrigenda
	I	Announcement

NUMBER 8

R. M. Quinta Ferreira, A. C. Costa and **A. E. Rodrigues**	721	Dynamic behavior of fixed-bed reactors with "large-pore" catalysts: a bidimensional heterogeneous diffusion/convection model
S. J. Benz and **J. Cerda**	753	Optimal synthesis of flexible heat-integrated distillation trains
M. van Dootingh, F. Viel, D. Rakotopara, J. P. Gauthier and **P. Hobbes**	777	Nonlinear deterministic observer for state estimation: application to a continuous free radical polymerization reactor

D. R. Lewin and D. Haim 793 H_∞-mapping as a tool for defining achievable robust closed-loop performance for SISO systems

W.-C. Shin and G. R. Carmichael 805 Comprehensive air pollution modeling on a multiprocessor system

M. Ç. Koçak 817 Letter to the Editors

NUMBER 9

J. A. Leonard, M. A. Kramer and L. H. Ungar 819 A neural network architecture that computes its own reliability

A. Rafalimanana, M. Cabassud, M. V. Le Lann and G. Casamatta 837 Adaptive control of a multipurpose and flexible semi-batch pilot plant reactor

P. J. Hanratty and B. Joseph 849 Decision-making in chemical engineering and expert systems: application of the analytic hierarchy process to reactor selection

D. D. Brengel and W. D. Seider 861 Coordinated design and control optimization of nonlinear processes

K. H. Lau and D. L. Ulrichson 887 Effects of local constraints on the convergence behavior of sequential modular simulators

G. M. Ostrovsky, A. S. Ocheretovy and T. A. Berezinsky 893 Approach to steady-state calculations of chemical plants

M. Hoza and M. A. Stadtherr 901 Second-order correction methods for chemical process optimization

Short Note

J. Mydlarz and D. Briedis 917 Growth rate dispersion vs size-dependent growth rate for MSMPR crystallizer data

NUMBER 10/11

G. V. Reklaitis iii Announcement—Best Paper of 1990

N. S. Tavare 923 Mixing, reaction and precipitation: environment micromixing models in continuous crystallizers—I. Premixed feeds

I. Quesada and I. E. Grossmann 937 An LP/NLP based branch and bound algorithm for convex MINLP optimization problems

L. G. Bullard and L. T. Biegler 949 Iterated linear programming strategies for nonsmooth simulation: continuous and mixed-integer approaches

M. J. Liebman, T. F. Edgar and L. S. Lasdon 963 Efficient data reconciliation and estimation for dynamic processes using nonlinear programming techniques

A. Waters and **J. W. Ponton** 987 Managing constraints in design: using an AI toolkit as a DBMS

Short Note
P. De Vidts and **R. E. White** 1007 A semi-analytical solution method for linear partial differential equations

Letters to the Editors
Z. Rojkowski 1011 Remarks on numerical estimation of size-dependent crystal growth rates

J. Mydlarz 1015 Authors' reply to the letter of Dr Rojkowski

NUMBER 12

H. Wright and **D. Ramkrishna** 1019 Solutions of inverse problems in population balances—I. Aggregation kinetics

E. P. Nahas, M. A. Henson and **D. E. Seborg** 1039 Nonlinear internal model control strategy for neural network models

Gh. Juncu and **S. Bildea** 1059 Bifurcation points computation of the diffusion–reaction equations

U. Kabatek and **R. E. Swaney** 1063 Worst-case identification in structured process systems

Short Note
M. Shahrokhi and **F. Naimpour** 1073 A feedback control scheme for SISO systems with time delays and constrained inputs

VOL. 16 SUPPLEMENT

ESCAPE-1

R. Gani vii Preface

D. W. T. Rippin ix Introduction to the ESCAPE series

PLENARY PAPERS

R. S. Benson S1 Computer aided process engineering—an industrial perspective

J. Villadsen S7 Computer aided modelling of complex fermentation processes

INVITED PAPERS

W. Gutermuth S15 Applications of computer integrated process engineering in the chemical industry

M. L. Michelsen S19 Phase equilibrium calculations. What is easy and what is difficult?

D. T. Wu	S31	Computer aided application of chemical engineering principles in the development of coatings
L. G. Koster, E. Gazi and **W. D. Seider**	S43	Finite elements for near-singular systems—an overview
L. J. Christiansen	S55	A computer aided engineering system for development of catalytic processes
IR. R. A. Van Wijk and **M. R. Pope**	S69	Advanced process control and on-line optimisation in Shell refineries
L. T. Biegler	S81	Tailoring optimization algorithms to process applications
S. Saelid, A. Mjaavatten and **K. Fjalestad**	S97	An object oriented operator support system based on process models and an expert system shell

CONTRIBUTED PAPERS

Process Dynamics and Process Control

G. Heyen, B. Kalitventzeff, P. Hutchinson, H. Yeung and **M. Gill**	S109	Simulation of fast transients in fluid transport equipments and utility networks
L. Naess, A. Mjaavatten and **J.-O. Li**	S119	Using dynamic process simulation from conception to normal operation of process plants
A. Kröner, W. Marquardt and **E. D. Gilles**	S131	Computing consistent initial conditions for differential-algebraic equations
F. López-Isunza	S139	Dynamic modelling of an industrial fluid catalytic cracking unit
D. R. Lewin, M. Faigon, A. Fuchs and **R. Semiat**	S149	Modelling and control of two-phase systems
S. Engell and **R. Müller**	S157	Fast and efficient selection of control structures
L. E. Ebbesen	S165	Main fractionator crude switch control
G. Bortolotto, J. Romagnoli and **A. Desages**	S173	Robust performance determination in the presence of plant uncertainties. A polynomial approach
M. Rovaglio, T. Faravelli, G. Biardi, P. Gaffuri and **S. Soccol**	S181	Precise composition control of heterogeneous azeotropic distillation towers
M. T. Vester, R. J. P. Van der Linden and **J. L. A. Pangels**	S189	Control design for an industrial high-purity distillation column using mechanistic modelling and process identification
F. Szeifert, T. Chovan and **L. Nagy**	S197	Adaptive optimizing control algorithm for a CSTR
S. M. Tonelli, L. V. Aparicio and **N. B. Brignole**	S205	The separation units of an ethylene plant under revamping conditions: dynamic analysis and regulation

Computer Integrated Process Engineering

U. E. Lauks, R. J. Vasbinder, P. J. Valkenburg and **C. van Leeuwen**	S213	On-line optimization of an ethylene plant
M. Graells, A. Espuña and **L. Puigjaner**	S221	Optimization of process operations in the leather industry
J. A. Klein, D. T. Wu and **R. Gani**	S229	Computer aided mixture design with specified property constraints
L. Regan, I. D. L. Bogle and **P. Dunnill**	S237	Simulation and optimization of metabolic pathways
J. Perregaard and **E. L. Sørensen**	S247	Simulation and optimization of chemical processes: numerical and computational aspects
P. Skovborg and **M. L. Michelsen**	S255	A flexible algorithm for simulation and optimization of continuous distillation
K. W. Mathisen, S. Skogestad and **E. A. Wolff**	S263	Bypass selection for control of heat exchanger networks
I. M. Mujtaba and **S. Macchietto**	S273	An optimal recycle policy for multicomponent batch distillation
P. Djavdan	S281	Design of an on-line scheduling strategy for a combined batch/continuous plant using simulation
C. A. Crooks, K. Kuriyan and **S. Macchietto**	S289	Integration of batch plant design, automation, and operation software tools
C. L. Johansen, L. H. Christensen, J. Nielsen and **J. Villadsen**	S297	Monitoring and control of fed-batch penicillin fermentation

New Developments in the Use of Computers in Process Engineering

O. M. Wahnschafft, J. P. Le Rudulier, P. Blania and **A. W. Westerberg**	S305	SPLIT: II. Automated synthesis of hybrid liquid separation systems
F. Friedler, K. Tarjan, Y. W. Huang and **L. T. Fan**	S313	Combinatorial algorithms for process synthesis
A. Goršek, P. Glavič and **P. Senčar**	S321	Optimal process design for specialty products
W. Marquardt	S329	An object-oriented representation of structured process models
G. E. Rotstein, R. Lavie and **D. R. Lewin**	S337	A qualitative process-oriented approach for chemical plant operations—the generation of feasible operation procedures
E. Martínez, L. Beltramini, H. Leone, C. A. Ruiz and **E. Huete**	S345	Knowledge elicitation and structuring for a real-time expert system for monitoring a butadiene extraction system

M. L. Mavrovouniotis, S. Prickett and L. Constantinou S353 Object-oriented estimation of properties from molecular structure

A. Kraslawski, T. Koiranen, L. Nyström and C. Gourdon S361 Concurrent engineering: fuzzy simulation and similarity in quality loss function deployment and applications

M. N. Karim and S. L. Rivera S369 Comparison of feed-forward and recurrent neural networks for bioprocess state estimation

O. Simonsen and H. Livbjerg S379 The influence of seed nuclei on aerosol condensation

Simulation and Modelling Issues in Computer Aided Process Engineering

A. Lucia and R. Taylor S387 Complex iterative solutions to process model equations?

B. Landwehr, G. Wozny and H. Hartmann S395 Simulation of coupled columns with three phases

A. Zimmermann, C. Gourdon, X. Joulia, A. Gorak and G. Casamatta S403 Simulation of a multicomponent extraction process by a nonequilibrium stage model incorporating a drop population model

M. J. Hounslow and E. J. W. Wynn S411 Modelling particulate processes: full solutions and short cuts

T. Salmi, J. Wärnå, P. Lunden and J. Romanainen S421 Development of generalized models for heterogeneous chemical reactors

J. A. Hansen and B. H. Cooper S431 Process simulation of refinery units including chemical reactors

A. I. Clarkson, I. D. L. Bogle and N. J. Titchener-Hooker S441 Modelling and simulation of fractional precipitation—comparison with pilot plant data

P. Wang and E. H. Stenby S449 Phase equilibrium calculation in compositional reservoir simulation

P. Rajniak, M. Kralik and J. Ilavsky S457 A steady state equation-oriented simulator for separation processes of solutions with weak electrolytes

Computer Aided Process Engineering Tools: Present Trends and Future Needs

J. F. G. Shaw S465 The integration of process simulation and engineering design

F. B. Canfield and P. K. Nair S473 The key to computer integrated processing

G. H. Ko, M. M. Osias, D. A. Tremblay, M. D. Barrera and C.-C. Chen S481 Process simulation in polymer manufacturing

T. Németh, E. I. Varga, K. M. Hangos and S. Bay Jørgensen S491 A tool for development of qualitative and approximate quantitative process models

M. Sanchez, A. Bandoni and J. Romagnoli	S499	PLADAT: a package for process variable classification and plant data reconciliation
J. Klemsa and T. Perris	S507	Quality information for production management. A performance analysis tool for interactive use by plant personnel
S. Fararooy, J. D. Perkins and T. I. Malik	S517	A software package for process controllability analysis
P. Bekkers and J. E. Rijnsdorp	S523	EPIC, a software tool for the control engineer in early process design
I. Turunen, M. Piironen and K. Westerstråhle	S531	EXPERO—an advanced support system for hydrogen peroxide process control
A. de Mitri, A. d'Arminio Monforte and G. Pagani	S539	Inexact simulation problems by CHEOPE
